

**SPACE ECONOMY - IS  
INVESTING IN SATELLITES AND  
SPACE TECH THE NEXT  
FRONTIER ?**

# **SPACE IS NO LONGER JUST FOR ASTRONAUTS**

**For a long time, space felt like something only NASA or ISRO cared about. But now, things are changing fast. Cheaper rocket launches and the world's growing need for data have turned space into a booming business. What was once science fiction is slowly becoming everyday reality.**

# **SATELLITES IN OUR EVERYDAY ENVIRONMENT**

**Do you believe that satellites are only useful to astronauts? No longer. They run Google Maps, monitor the weather, provide internet access to isolated villages, and even assist farmers with crop planning. Additionally, new models now allow businesses to "rent" satellite services rather than buy them, which makes space data helpful for small businesses as well.**

# STARTUPS AIMING FOR THE TOP

**Startups are pursuing innovative ideas alongside established companies: Varda is producing goods in zero gravity, Astroscale is clearing out space debris, and Orbit Fab is constructing space fuel stations. Space is beginning to resemble the next gold rush, and investors are supporting them.**

## **THE DIFFICULTIES ARE GENUINE**

**Naturally, things are not always easy. The sky above us is getting overrun with satellites more quickly than we can handle, rockets are costly, and delays are frequent. Space rules are still being developed by governments, and any mistakes could cost billions of dollars. It's a dangerous adventure, but that's part of the fun.**

## WHAT MAY HAPPEN NEXT

**Future plans include mining asteroids, constructing hotels in orbit, and even manufacturing materials and medications there. These concepts may seem audacious, but so were smartphones and electric vehicles in the past. Space is gradually becoming an actual component of the world economy.**

## **THE BOTTOM LINE**

**Investing in space is happening now, not just in the future. Opportunities are expanding swiftly, ranging from startups resolving issues in orbit to satellites that simplify our daily lives. While the daring may investigate daring startups vying for the stars, most investors find it safe to keep an eye on well-established businesses.**
